

S4Cplus* USB Port Upgrade

Now you can transfer your files from your computer to the S4Cplus* Robot Controller with a common memory stick using the Wolf Robotics USB upgrade port.

Tired of connecting your computer to the robot controller through a clumsy FTP program or floppy disk or even carrying your laptop to the production floor to hook-in directly? With the new USB upgrade port you can simply load your programs to a memory stick and then take it to the controller for saving to the robot computer. It's simple, it's fast and it's convenient!

In addition, the process to convert your robot controller is simple and inexpensive. Hardware and installation is only \$325 per system (plus travel and expenses) and is performed by our qualified customer support personnel that are stationed throughout the U.S.

To make the process as easy as possible you can place your order and our service department will add you to their log. You can then wait until one of our support personnel is in the area for a service call or until another customer in the vicinity also orders the upgrade, at which time we will schedule an install at a reduced rate for both.

Why not take advantage of our preventive maintenance offers and get the USB upgrade during the visit?

Call our Service Hot Line 866-WOLF-911 for complete product details and recommendations on how you can save money on installation.

**Hardware/Software requirements: DSQC 540 CPU and BaseWare Revision 101 or greater.*
