

PRODUCTION SUPPORT TRAINING CLASS

Wolf Robotics offers training classes to improve the capabilities of your production operators and programmers. If you have new operators or programmers that need to be trained or experienced workers that could use a little tune-up, this is the class for you. Our instructors can show you how to utilize the system peripherals, incorporating best programming practices to reduce cycle time and improve product quality.

Course curriculum includes:

- Understand weld programming best practices to support production routines
- Understanding how to operate the robot in the manual mode
- Ability to navigate through a production weld routine and skip welds if necessary
- General overview of weld process
- Set up and/or modify weld, seam, and weave data types
- Ability to tune the weld process during production operation
- Able to replace all components pertaining to the welding torch
- Able to clean and replace the wire-feed wheels
- Understand and able to repair the torch cleaning station
- Understanding how to utilize and manage BullsEye®
- Able to by-pass/block the water supervision error or other I/O issues
- Able to perform a manual wire feed
- Able to perform a manual gas flow check
- Understanding proper system shutdown procedures
- Perform a BackUp and a Restore
- Performing proper process to update the Revolution Counters
- Understanding how to perform a cold boot

24/7/365 Service 

You may discover that your present system is capable of more through-put with the proper approach and technique incorporated to production programs as well as maintaining basic system peripherals. These adjustments and refining of production programs and equipment tweaking could prolong the robots life while postponing additional equipment purchases to a future date.

For more information or to check class schedules, pricing or registration, contact Wolf Robotics at training@wolfrobotics.com or call 1-866-WOLF-911.

Wolf Robotics and Airgas, Inc. are proud partners in the welding industry.
